

John R. Huizenga

Nuclear Science Symposium

Welcome to Rochester, participants of the John Huizenga Nuclear Science Symposium!

Let us begin by cheering the person we all came to see and celebrate today –

Many Happy Returns, John!

W. Udo Schröder

To honor its magnificent elders has been a custom followed by all great civilizations. Such a celebration implies more than just an expression of gratitude for a job well done, a life well lived. In showing our appreciation of John today, we, his former students, associates, and colleagues, are also asserting the continued validity and the importance of the (human and scientific) principles, which he has promoted and by which he has lived and worked. Therefore, beyond acknowledging John's past important direct contributions to nuclear science, the presentations on this symposium are to illustrate his influence in launching scientific careers of integrity and substance, his living legacy.

The event is sponsored by the Department of Chemistry, the Department of Physics and Astronomy, and the US Department of Energy.

The enthusiasm and efforts by Ms. Debra Haring have been crucial for the efficient planning of the event. -- Thanks Debra!
